Defect No	Defect	Severity
1	The app can only open at most 7 tabs, if it reaches the 8 th tab, the program will crash	Critical
2	When clicking the setting button of the menu, it will close the app	Important
3	The language setting of the app can be only changed once, after that nothing will show up in the language option	Important
4	When the 'New Tab' option is clicked, the app crashes – On Kindle Fire	Critical
5	If an article is saved and then if the user clicks on the 'List of Articles Saved' option the app crashes	Critical
6	After searching for an article and clicking on Share Article, nothing happens	Important
7	The language setting cannot set the language correctly, it will set the next language after the chosen one	Important
8	When the search dialog box is left empty and search is pressed, the app doesn't give the user a warning that the dialog box is empty	Workaround
9	The app will crash when closing the first tab in the navigation drawer	Critical
10	Entered input 'bbbbbbbb', the app opens random articles every time the input is entered – On Kindle Fire	Important
11	Searched for word "page", instead of getting multiple keyword matches, 'Page,Arizona' opened up. Test ran on Kindle Fire	Critical
12	Pressing the back button on the main page, causes app to crash – On Kindle Fire	Workaround
13	The button between the search button and the menu button cannot be used and nothing happen if it is clicked	Workaround
14	If the language button is clicked, the dialog shows "loading unavailable languages..." rather than "available languages"	Workaround
15	When changing the language, even if the cancel button is pressed, the language is still changed	Important
16	When a link is held and tapped inside an article, no pop up menu is displayed	Important
17	Cannot zoom, copy and paste in the app.	Workaround
18	Search option to find keywords in article doesn't work and crashes the app. When re-run, even	Critical

	articles like 'pages,'google' etc cannot be found.	
19	<p>Different articles by the same input occur when searched across different search bars.</p> <ol style="list-style-type: none"> 1. There is a search bar which has been provided in the app 2. There is a search bar which appears when an article is read <p>When an input is searched in both of these search boxes, different articles are displayed</p>	Workaround
